

Deadly and Dangerous Facts

A polar bear will share a big meal with other polar bears—but only if they beg first! The other bears have to stay low, circle around the bear in charge, and then touch noses with the boss bear.

Think a platypus and a shark have nothing in common? Think again—both animals sense electric pulses, and that's how they find their prey underwater.

Long-tailed weasels are seriously creepy. They lick up their victims' blood and use the fur of their prey to stay warm in their nests.

In Japan, the poisonous puffer fish is considered a delicacy. Specially trained chefs cut away the dangerous parts. But some people still die every year from eating puffer fish.
